

## The Voice of the Editor-in-Chief

Dear Colleagues,

Traditionally, at the beginning of the new year I would like to summarize the year that has passed and first of all thank you for the active participation in creating our journal by submitting many interesting papers to "Clinical Diabetology". At the same time, I would like to emphasize that it has been two years since we started publishing our journal entirely in English. Moreover, increased proportion of original papers and case reports received by the Editorial Office have been submitted by foreign authors, which significantly broadens our view on diabetes care and improves the rank of "Clinical Diabetology". The manuscripts sent by you, both review and original articles as well as case reports, deal with all aspects of diabetes management and their content is useful in everyday practice. Last year we also discussed many difficult, sometimes neglected, topics related to carbohydrate metabolism disorders, for example, those concerning sexual dysfunction, risk of cancer in relation to anti-diabetic drugs, the role of dietary intervention in the treatment of gestational diabetes and primary and secondary prevention of type 2 diabetes.

I am happy to present to you the last issue of "Clinical Diabetology" in 2017. I would like to draw your attention to the problem of diabetes care quality discussed by researchers from Libya, an interesting case report of the use of hydroxychloroquine in type 2 diabetes refractory to treatment with more than two oral hypoglycaemic drugs, and rare complications after the use of sitagliptin presented by the authors from India. Worth reading are also articles about the management of diabetic foot syndrome.

Summing up, I would like to emphasize again that the success of the "Clinical Diabetology" journal is primarily your merit and I look forward to further fruitful cooperation with you in creating the journal of ever higher scientific quality and practical value. Evidence of its growing importance is the fact that the Editorial Board, with the significant support of the General Board of the Diabetes Poland and the Publisher, decided to apply for "Clinical Diabetology" to be listed in other databases, first ESCI (Emerging Sources Citation Index) being a part of the Web of Science Core Collection and Pubmed Central.
