

### Supplementary File

**Table S1.** Median values from Q1 and Q3 and minimum and maximum values for age differences between study groups.

**A) For major osteoporotic fractures (MOF)**

	Age (N = 67)	
	Median (Q1–Q3)	Minimum–Maximum
<b>Very high risk (FRAX for MOF) (N = 31)</b>	73.00 (67.00–76.00)	58.00–88.00
<b>High risk (FRAX for MOF) (N = 36)</b>	66.00 (61.50–70.50)	53.00–82.00

**B) For hip fracture (HF)**

	Age (N = 45)	
	Median (Q1–Q3)	Minimum–Maximum
<b>Very high risk (FRAX for HF) (N = 35)</b>	73.00 (70.00–77.00)	53.00–88.00
<b>High risk (FRAX for HF) (N = 10)</b>	68.50 (64.00–70.00)	62.00–78.00

**C) For extended assessment criteria**

	Age (N = 72)	
	Median (Q1–Q3)	Minimum–Maximum
<b>Very high risk (N = 48)</b>	72.50 (65.50–75.00)	51.00–88.00
<b>High risk (N = 24)</b>	66.00 (60.50–69.00)	53.00–78.00
