

Supplementary Figure 1. Effect of sunitinib treatment on the liver structure of streptozotocin-treated mice. **A.** Diabetic mouse (DM); **B.** DM mouse treated with sunitinib (DM+S); **C.** Normal untreated control mouse (C group); **D.** Normal control mouse treated with sunitinib (C + S). Diabetes was induced by streptozotocin administration and sunitinib was administered for 4 weeks as described in Methods. H&E staining. Scale bar: 50 μ m.
