

Table S1. Initial and definitive diagnosis with the immunophenotype of primary tumor

	Initial (29.11.2019)	Definitive (19.05.2021)
Diagnosis, immunophenotype	Serous ovarian cancer subtype, high grade. Immunophenotype: PAX8+ p16+ WT1+ calretinin — pT2bNxMX	Serous ovarian cancer subtype, high grade. Immunophenotype: Advanced cancer. State after exploratory laparotomy and neoadjuvant chemotherapy. State after surgical treatment and chemotherapy. Deep vein thrombosis of right lower limb. Lymphangitis carcinomatosa
	Exploratory laparotomy (27.11.2019)	Relaparotomy (4.05.2020)
Surgery	Tumor in minor pelvis (serous adenocarcinoma, probably gynecologic), dissemination in peritoneal cavity	Adhesiolysis. Biopsy of tumors. Injury of the right ext. iliac artery. Anastomosis end-to-end
	Neoadjuvant	Adjuvant
Chemotherapy	Paclitaxel/Carboplatinum/Avastin 4 cycles from September 2019 to November 2019	Paclitaxel/Carboplatinum/Avastin — 2 cycles Avastin — 4 cycles Caelyx — 3 cycles Taxol — 4 cycles
