Table S1. Baseline characteristics of both groups and results

	OS	ICs	In total	<i>P</i> -value
Age (mean, SD) years	68.1 (8.94)	67.1 (8.67)	67.7 (8.83)	0.64
	n (%)	n (%)	In total n (%)	<i>P</i> -value
Procedure operator	326 (65.2%)	174 (34.8%)	500 (100%)	<0.05
Female sex	174 (52.9%)	90 (51.1%)	264 (52.8%)	0.72
TICI 2b-3 score	227 (69.6%)	114 (65.8%)	341 (68.2%)	0.43
In- hospital deaths	51 (16.3%)	36 (21.7%)	87 (17.4%)	0.13
3- month mortality	92 (28.1%)	53 (30.6%)	145 (29.0%)	0.58
Hypertension	255 (77.2%)	123 (70.4%)	378 (75.6%)	0.15
Diabetes malignus II	84 (25.6%)	45 (25.8%)	127 (25.4%)	0.97
Smoking	118 (36.6%)	76 (44.8%)	194 (38.8%)	0.14
Dyslipidemia	133 (40.9%)	69 (40.0%)	202 (40.4%)	0.88
IQR- interquartile range, ICs- interventional cardiologists, mRS- modified Rankin scale, OS- other specialists, TICI-Thrombolysis in Cerebral Infarction, SD- standard deviation
