Supplementary Figure S1 Myocardial rest perfusion single-photon emission computed tomography after ^{99m}Tc -MIBI injection.

A. Cross-sectional images of the left ventricle. Yellow arrows show severe perfusion defect in apex and para-apical segments of the left ventricle. Red arrows show moderate perfusion defect in lateral and postero-lateral left ventricle walls.

B. Severity and location of the perfusion defect - semiquantitative assessment (polar map presentation).

C. 3D - reconstruction of the left ventricle. The picture shows the extent and exact location of the perfusion defect.
