**Supplementary Table S1.** Intra-observer reproducibility of different mitral regurgitation parameters from echocardiography measured using interclass correlation coefficient (ICC)

*Calculated from a random sample of 10 patients.*  
Values are represented as number (percentage) or median (interquartile range)

	Intra-observer reproducibility	
	ICC (95% CI)	<i>P</i>
<b>Baseline</b>		
effective regurgitation orifice	0.997 (0.990 – 0.999)	<0.001
regurgitation volume	0.994 (0.974 – 0.998)	<0.001
<b>Follow-up</b>		
effective regurgitation orifice	0.993 (0.988 – 0.996)	<0.001
regurgitation volume	0.989 (0.971 – 0.991)	<0.001
