Table S1. The independent predictors of serum lipoprotein (a) concentration

	Univariable model			Multivariable model		
	B	P-value	95% CI	B	P-value	95% CI
Age, per 1 year	0.246	0.306	-0.225–0.716	0.062	0.797	-0.413–0.538
Gender, M vs F	-8.730	0.002	-14.267 to -3.192	-7.774	0.007	-13.418 to -2.130
LDL-cholesterol, per 1 mmol/l	1.882	0.055	-0.044–3.808	2.263	0.021	0.343–4.183
Fibrinogen, per 1 g/l	10.524	<0.001	5.442–15.606	8.478	0.006	2.459–14.497
CRP, per 1 mg/l	0.800	0.027	0.091–1.509	0.193	0.639	-0.614–1.000

Abbreviations: CI, confidence interval; LDL, low-density lipoprotein; CRP, C-reactive protein
